

Cool Guys Group Week 1

Project Summary

We propose a social networking app with a focus on food. This social media app will have standard networking features where users can post, reply to, and rate content; follow other users, and message other users. Our app's core feature is the ability to browse appealing food content and then be able to recreate it by viewing recipes attached to said post. The goal of this app is to encourage users to cook themselves and promote their culinary medium to others, with an emphasis on congratulating and supporting amateur cooks and foodies.

Team Members – (Hours Worked on Project)

Lucas – 20

Dylan – 15

Justin - 15

Completed Tasks from Last Week – (Task Owner)

Finished majority of API routes and cleaned up code – Lucas, Dylan

Finalized Infrastructure and related routes - Justin

Planned Time

Actual Time

Remaining Hours in Budget

Planned Tasks for Next Week – (Task Owner)

Build reusable components and template pages.

Project Risks – (High, Medium, Low)

Bugs in some routes that will take time to fix this week.

Overdue Tasks

Finish API

Issues

We recognized some holes in our recipe system that should have been resolved once the code works.

Some new routes are producing exceptions when trying to convert efcere code into SQL.

Follow-up Actions – (Responsible Person)

Fix remaining routes on API
