Cool Guys Group Week 2

Project Summary

We propose a social networking app with a focus on food. This social media app will have standard networking features where users can post, reply to, and rate content; follow other users, and message other users. Our app's core feature is the ability to browse appealing food content and then be able to recreate it by viewing recipes attached to said post. The goal of this app is to encourage users to cook themselves and promote their culinary medium to others, with an emphasis on congratulating and supporting amateur cooks and foodies.

Team Members – (Hours Worked on Project)

Lucas – 10

Dylan – 10

Justin - 10

Completed Tasks from Last Week – (Task Owner)

https://recipi.youtrack.cloud/agiles/141-3/142-4

Planned Time	Actual Time	Remaining Hours in Budget

Planned Tasks for Next Week – (Task Owner)

https://recipi.youtrack.cloud/agiles/141-3/current

Project Risks – (High, Medium, Low)

Web sockets are hard 😊

Overdue Tasks

Template pages and some reusable components

Issues

I missed setting a primary key in db that costed way too much time to debug (it works now yay) - Lucas

Follow-up Actions – (Responsible Person)
